DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, drawn to a silicon dioxide powder with a hydroxyl group density of 2.5 to 4.7 OH/nm².

Group II, claim(s) 6-7, drawn to a process for producing silicon dioxide powder with a hydroxyl group density of less than 2.5 OH/nm².

Group III, claim(s) 8-14, drawn to an aqueous dispersion comprising a silicon dioxide powder with a hydroxyl group density of 2.5 to 4.7 OH/nm².

Group IV, claim(s) 15, drawn to a method for producing a coating comprising an aqueous dispersion with a silicon dioxide powder with a hydroxyl group density of 2.5 to 4.7 OH/nm².

Group V, claim(s) 16, drawn to a method of producing a polishing comprising an aqueous dispersion with a silicon dioxide powder with a hydroxyl group density of 2.5 to 4.7 OH/nm².

Group VI, claim(s) 17, drawn to a method of producing a glass comprising an aqueous dispersion with a silicon dioxide powder with a hydroxyl group density of 2.5 to 4.7 OH/nm².

Group VII, claim(s) 16, drawn to a method of producing a sol gel comprising an aqueous dispersion with a silicon dioxide powder with a hydroxyl group density of 2.5 to 4.7 OH/nm².

2. The inventions listed as Group II and remaining groups do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The

Art Unit: 1791

special technical feature of a silicon dioxide powder with a hydroxyl group density of 2.5 to 4.7 OH/nm² is not shared by the groups and lacks unity. Therefore, restriction is appropriate.

3. The inventions listed as Group I, Group III, Group IV, Group V, Group VI, and Group VII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature shared among the groups of a silicon dioxide powder with a hydroxyl group density of 2.5 to 4.7 OH/nm² is not novel over the prior art. Humbert ("Estimation of hydroxyl density at the surface of pyrogenic silicas by complementary NMR and Raman experiments," JOURNAL OF NON-CRYSTALLINE SOLIDS (1995), 191, 29-37) teaches a silicon dioxide powder with a hydroxyl group density of 4.0 OH/nm². Accordingly, the special technical feature linking the different groups do not provide a contribution over the prior art, and no single general inventive concept exists. Therefore, restriction is appropriate.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
